- 3) **VR (Rem. 700 SA inlet) integral recoil lug – spiral fluted – 308 bolt face single shot –in stock**
\$1795

Stiller's Precision Firearms, LLC

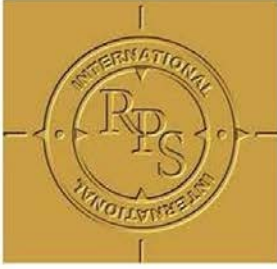

These Predator actions are proven excellent actions which offer many refinements over the Remington 700 actions, but still use the Remington 700 stock inlet pattern so you have a wide offering of stocks to choose from. These actions feature reduced bolt body to receiver clearances, one piece fluted bolt (Remington is 3 pieces), receiver mounted bolt release, shear pin base optional, stiff receiver for reduced flexing, tough m16 style extractor and coated bolt. These actions are commonly “relabelled” and used by many custom rifle builders in the long range shooting field.

** Pal required.

The Atlas Tactical action is a Remington semi-clone action, featuring a side bolt release and trigger hanger. There is little modification necessary to use a Remington 700/40x stock or chassis.

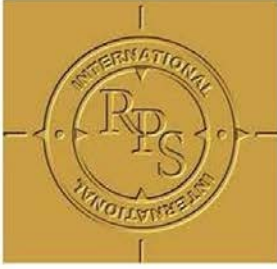

The most rugged action possible for practical, tactical, or hunting. We use a Black Nitride finish from H&M Metal Processing. This allows you to use this action "dry" or without lubrication for extreme environments. As always it is best to use lubrication in normal day to day shooting. In addition to the Black Nitride process, a fluted bolt, to help move dirt into the flutes allowing better function of the action.

Magazine well to use the Accuracy International single stack magazines. One of the key features of this action is the TG ejector, it is a mechanical ejector that does not put any chamber pressure on the round. It is also a "never fail" setup, meaning that there are no springs to get gummed up and stop working.

Extreme Duty Bolt Stop, that bolts to the side of the action via a 6/48 screw. It is truly the most reliable bolt stop upgrade on the market!

Finish it all off with a pinned 20 MOA anodized picatinny rail, a dual pin recoil lug, and a tactical bolt knob.

1) Long action 308 boltface repeater - \$1695 (less \$50 with build) – in stock.
