Cerakote Firearm Coatings

Please see the NIC Industries Website for actual colors and combinations.

<http://nicindustries.com/guncoater.php>

The unique formulation used for Cerakote Firearms Coatings enhances a number of physical performance properties. Each of these properties is rigorously tested to guarantee that Cerakote products remain at the forefront of the firearms coating market. To prove Cerakote is the leading firearm coating, NIC hired an independent military testing facility to perform a blind side by side comparison between Cerakote, KG Gun-Kote (listed no. 1 competitor) and Duracoat Firearm Finish (listed #2). In every test Cerakote outperformed both competitors products. All tests were performed in accordance to the ASTM test listed on the Cerakote website. The complete test report is available for review directly from the Cerakote Customer Service Group.
