Shadetree Engineering

A joystick top for your benchrest shooting top!
Rifle stays centered over your rest – no cantilever system which has flex!

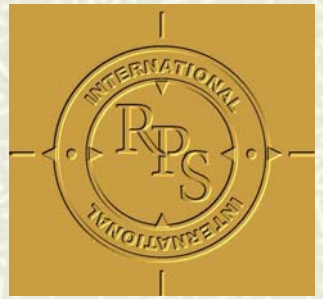

This rest top was designed to allow shooters to replace their existing rest top with our quality omni- directional adjustable top.

Range of adjustment allows 20 plus inches (508mm) of vertical and horizontal motion at 100yards. This is based on a standard benchrest type configuration of 28 inches (711mm) between CL of front and rear bags.

Shadetree Engineering

The omni-directional motion is achieved by moving a joystick. It is free rotating and requires no locking or twisting motion. The feel can be adjusted according to personal choice and weight of rifle. Also the return-to-battery stop moves with the bag as compared to some rests having a stationary stop. This new top has a .750-10 (3/4-10) threaded post with friction screw groove and will fit most standard bases (Hart, Bald Eagle etc. – Caldwell available upon request)

Total unit height in the centered position is 1.42 in. (36.07mm), less post, from underside of base to bottom surface of sandbag. Sandbag is not included. (This is less than most windage tops, and not much greater than some non-adjustable tops.)

Price \$375 USD or \$445 Canadian
